Penguin Bay Biology

- Biology Class, Simplified -

1. Why is HIV so dangerous? **Its high mutation rate and fast replication cycle.**

2. Virions are typically released from bacteria cells by means of lysis. What does that mean?

A rupture in the bacterium's cell membrane due to a compromise in its structural integrity.

3. What is a capsid? **A virus' protein coat.**

4. Was there anything about today's lesson that you don't understand? If so, explain:

Answers will vary.
